

Loudspeaker Design Cookbook

7th Edition Figures

Fit In Window

ABOUT THIS CD

This CD contains new figures from the 7th edition of the *Loudspeaker Design Cookbook*. You will find the figures from the book organized by the chapter in which they occur. The figures are presented in full-color in PDF format.

Also included on the CD is a section of figures relating to Chapter 6: Loudspeaker Baffles which are not included in the book. These figures are examples from the study of diffraction presented in the book but with different size drivers. The examples included are for 4.5", 5.25", and 6.5" drivers (see page 119 of the book). These examples relate to the 8" woofer examples in the book. To identify the various examples, these figures have been named with the following convention:

Figure 6.12a where "a" designates a 4.5" driver was used

Figure 6.12b where "b" designates a 5.25" driver was used

Figure 6.12c where "c" designates a 6.5" driver was used

The examples relate to the figures 6.12 through 6.53 in the book (see pages 119–124) in which an 8" driver was used.

To use the CD, choose the chapter of interest and then click on the figure desired to open the figure. Use the navigation bar to return to the main menu or to go to another chapter.

Also included on the CD is a free set of Microsoft Excel-based tools, **The LDC7 Design Suite Software**. To install the software, drag it from the CD to your desktop and open using Microsoft Excel. Follow the instructions contained on the first page of the workbook or [read the instructions here](#).
